## EXHIBIT B

Please **CANCEL** all currently pending claims and add the following new claims:

21. (New) A wiper system for a truck mirror comprised of

a pneumatic cylinder configured for attachment to a compressed air source, said pneumatic cylinder having an operating arm that is extendable and retractable, a stroke of approximately the width of the mirror and being configured for front mounting;

a mounting bracket for attaching the pneumatic cylinder to an exterior surface of the mirror, the mounting bracket being an angled member configured for attachment to the front of the pneumatic cylinder, positioning the front of the pneumatic cylinder abutting a first vertical side of the mirror, and attachment to an exterior surface of a backside of the mirror, wherein the operating arm extends from the first vertical side toward the second vertical side during extension, and

a clamping member configured for attaching a wiper blade to the operating arm.

22. (New) A wiper system according to claim 21, further comprising a switch for selectively controlling a flow of compressed air to the pneumatic cylinder.

23. (New) A wiper system according to claim 21, further comprising at least one air line configured for supplying compressed air to the pneumatic cylinder.

24. (New) A wiper system according to claim 21, wherein the pneumatic cylinder is a double-action cylinder.

25. (New) A wiper system according to claim 21, wherein the pneumatic cylinder is a single-action cylinder.

26. (New) A wiper system according to claim 22, wherein the switch is configured to manually control extension and retraction of the operating arm of the pneumatic cylinder.

27. (New) A wiper system according to claim 22, wherein the switch is configured to automatically control extension and retraction of the operating arm of the pneumatic cylinder.

28. (New) A wiper system mounted to a truck mirror, the wiper system comprised of

a pneumatic cylinder configured for attachment to a compressed air source, said pneumatic cylinder having an operating arm that is extendable and retractable, a stroke of approximately the width of the mirror and being configured for front mounting;

a mounting bracket for attaching the pneumatic cylinder to an exterior surface of the mirror, the mounting bracket being an angled member configured for attachment to the front of the pneumatic cylinder, positioning the front of the pneumatic cylinder abutting a first vertical side of the mirror, and attachment to an exterior surface of a backside of the mirror, wherein the operating arm extends from the first vertical side toward the second vertical side during extension, and

a clamping member configured for attaching a wiper blade to the operating arm.

29. (New) A wiper system according to claim 28, further comprising a switch operably coupled to the pneumatic cylinder and configured for selectively controlling a flow of compressed air to the pneumatic cylinder.

30. (New) A wiper system according to claim 29, further comprising at least one air line configured for supplying compressed air to the pneumatic cylinder.

31. (New) A wiper system according to claim 30, wherein the pneumatic cylinder is a double-action pneumatic cylinder.

32. (New) A wiper system according to claim 30, wherein the pneumatic cylinder is a single-action pneumatic cylinder.

33. (New) A wiper system according to claim 30, wherein the switch is configured for manual control of extension and retraction of the operating arm of the pneumatic cylinder.

34. (New) A wiper system according to claim 30, wherein the switch is configured for automatic control of extension and retraction of the operating arm of the pneumatic cylinder.

35. (New) A wiper system mounted to a truck mirror, the wiper system comprised of

a pneumatic cylinder operably coupled to a compressed air source, said pneumatic cylinder having an operating arm that is extendable and retractable, having a stroke of approximately the width of the mirror and being configured for front mounting;

a low-profile means for mounting the pneumatic cylinder to the mirror, said means for mounting the pneumatic cylinder to the mirror being attached to the front of the pneumatic cylinder and positioning the front of the pneumatic cylinder adjacent to or abutting a vertical side of the mirror; and

a means for mounting a wiper blade to the operating arm.

36. (New) A wiper system according to claim 35, further comprising a means for selectively controlling a flow of compressed air to the pneumatic cylinder.

37. (New) A wiper system according to claim 36, wherein the means for mounting the pneumatic cylinder to the mirror is attached to the backside of the mirror.

38. (New) A wiper system according to claim 37, wherein the means for selectively controlling a flow of compressed air to the pneumatic cylinder is configured for manual or automatic control of extension and retraction of the operating arm of the pneumatic cylinder.
